

HILL'S PRESCRIPTION DIET RANGE

Hill's Prescription Diet i/d offers highly digestible nutrition to help resolve diarrhoea in as little as 3 days.<sup>3</sup>

- Highly digestible with high levels of **electrolytes and B vitamins** to replace lost nutrients.
- With **ActivBiome+ technology**, a special blend of prebiotic fibres, to rapidly nourish the gut microbiome.
- Psyllium to promote healthy **intestinal motility and regularity**.

Follow your vet's guidance regarding your pet's treatment journey.  
Here are some extra tips to keep them as comfortable as possible:

- Provide a warm bed in which to rest and recuperate.
- Keep them relaxed, only exercising as instructed by your vet.
- Complete the course of prescribed medication.
- Keep wounds clean and dry, and don't let them lick!
- Keep an eye on their recovery – if you notice any problems, contact your vet.
- Most importantly, don't forget the extra cuddles!
- If you have any queries or concerns about your pet do not hesitate to contact your veterinary professional.

During treatment, pets may not have their usual appetite. Always follow your vet's advice. Some useful tips to help them keep eating:

- Offer food by hand at first – your pet will appreciate the affection.
- Warm food to body temperature before offering it – but don't make it too hot!
- If your pet refuses food for 24 hours, contact your vet clinic.
- Hydration is important – always have fresh water available.

HOW TO INTRODUCE THE NEW FOOD

We recommend introducing this new food over a period of around two weeks to help avoid any tummy upsets and for better acceptance.

Most pets don't like sudden change and are more willing to accept new things if change is gradual and they're allowed to make choices. For finicky and older pets or pets with health conditions, extend the transition period up to four or more weeks.

LED BY SCIENCE, LOVED BY PETS.

All Hill's foods are developed by a team of veterinarians, PhD nutritionists and food scientists.

HOME TO OUR #1 TASTE TESTERS.

Our global Pet Nutrition Centre is where our 900+ dogs and cats help us develop forward-thinking food – so your pet has the best nutrients for their best life.

FOOD, SHELTER & LOVE.

Hill's Food, Shelter & Love programme provides food to shelters and has helped over 12 million pets and counting find a forever home.

For quality, consistency and taste, or your money back.

\* Hill's guarantees Prescription Diet brand pet food for quality, consistency and taste. If you are not completely satisfied with any purchase of Prescription Diet brand pet food for these reasons, simply return the unused portion to your veterinarian for a full refund or replacement.

Critical  
Care

WHAT IS RECOVERY?

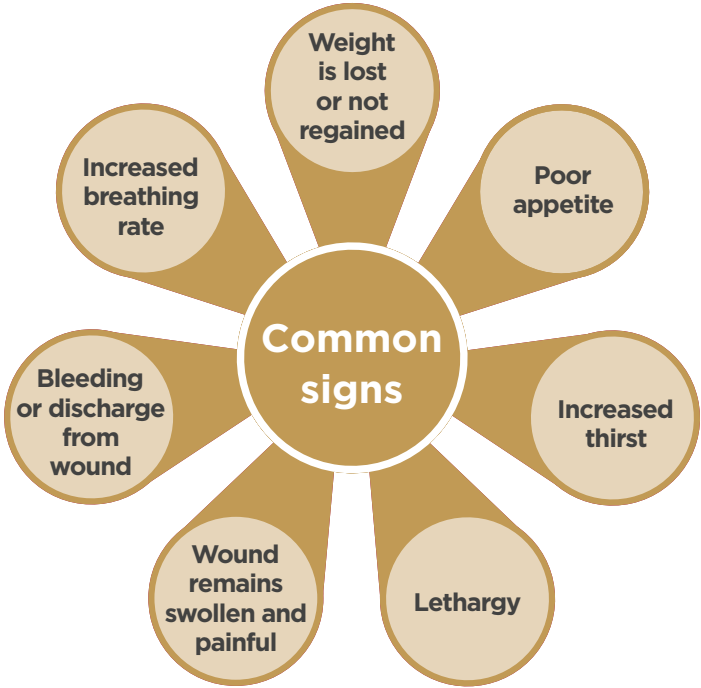

Pet recovery typically refers to the period following a medical procedure, surgery, illness, or injury during which a pet is healing and regaining its normal functions and behaviours. During this time, pets may require special care, medications, restricted activity, and follow-up visits to the veterinarian to ensure they are recovering properly.

THE STAGES OF RECOVERY

Acute	Mid-term	Chronic
Pets recovering from surgical procedures	Pets recovering from surgical procedures	Inappetence
Sepsis	Burn	Most forms of neoplasia
Trauma, including head trauma	Inappetence	
Fever	Cachexia and weight loss	
Inappetence	Debility, malnutrition and convalescence	
Tube feeding	Hypermetabolic states	
Anorexia		

COMMON WARNING SIGNS OF POOR RECOVERY

It's important to look out for the following signs and, if you notice any of them, contact your veterinarian.

THE IMPORTANCE OF NUTRITION

A pet's ability to get better after being sick or hurt depends greatly on what it eats. Your pet's body needs extra nutrients to support the healing process when sick or injured.

Maintain the correct balance of nutrients because the body has difficulty obtaining enough energy during this time. Food needs to be:

-  high in energy
-  easily digestible
-  extra-rich in essential fats, proteins, vitamins and minerals

It is critical that your pet is given a proper nutritional assessment. Consult your vet about what Hill's food they recommend feeding your pet to assist with their recovery.

HILL'S PRESCRIPTION DIET RANGE

On-Care

**Hill's Prescription Diet On-Care** is for pets in recovery, living with serious illness or struggling to gain weight that require adequate nutrition to help support their quality of life.

- Encourages an enthusiastic appetite with a unique nutrient formulation that **stimulates appetite** and supports increased food intake.
- Helps **maintain muscle** mass and has high levels of highly **digestible protein** and L-carnitine that helps maximise **fat for energy** utilisation sparing muscle protein.
- Supports healthy **digestion with ActivBiome+** blend of probiotics that nourishes the **gut microbiome** and is shown to help maintain consistent stool quality.

a/d

**Hill's Prescription Diet a/d** is clinically proven nutrition specially formulated for dogs and cats recovering from surgery, illness or injury.

- High levels of **digestible protein** and fat to support recovery.
- Energy dense and rich in calories to provide the **energy needed** during recovery.
- Smooth, soft, moist and **unique consistency**: stirring makes it more liquid, to enable multiple feeding options with exceptional taste to encourage eating.
- Clinically proven **antioxidants** to support immune function and **healing** with maximum flexibility in feeding – by hand, bowl, spoon, syringe or tube – to **deliver the essential nutrients** critically ill pets need.
